The present invention describes novel human proteins designated NoVX, where X is 1 to 20 e.g. NoV1. NoVX sequences can have neuroprotective, cytostatic, anticonvulsant, cerebroprotective, nootropic, cardiovascular, antidiabetic, antidonilamatory, antidonetic, antiarthritic, vivicide, immunosuppressive, antiallergic, antianemmic, antiarthritic, vivicide, immunosuppressive, antiallergic, antianemmic, indicaterial, fungicide, protozoacide and antihalminithe activities, and can be used in gene to therapy. The NOVX proteins, nucleotides or antibodies can be used in the numan disease selected from NOVX associated disorder, such as cancers convary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, ischaemic cerebrovascular disease, Alzheimer's disease or pick's cischaemic cerebrovascular disease, Alzheimer's disease or pick's disease, disease, alzheimer's disease or pick's disease, alzheimer's disease or pick's disease, or goitre), gastrointestinal correctors of vesicular transport (e.g. cystic fibrosis, disorders (e.g. ulcerative callergic reactions, autoimmune haemolytic autoimmune diseases (e.g. allergic reactions, autoimmune haemolytic and protozoal infections. The NOVX proteins can be used as immunogens to produce antibodies and as vaccines. The NOVX nucleotide sequences may be biological samples (tissue typing), and in forensic identification of a which is
                                                                                                                                                                                                                                                                  New NOVX polypeptides and polynucleotides useful for treating NOVX-associated disorders, such as cancers, neurological disorders, disorders of vesicular transport, gastrointestinal disorders, and autoimmune

The methods and compositions of the present invention are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and/or treating diseases and conditions relating to breast cancer, and may be used in gene therapy or antisense therapy. They can also be used in research, drug discovery, clinical medicine and forensic medicine. Sequences given in records ACC72012-ACC72074 represent polynucleotides of the invention that are this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at Itp.wipo.int/pub/published_pct_sequences

conditions relating to breast cancer, and may be used in gene therapy or antisense therapy. They can also be used in research, drug discovery, clinical medicine and forensic medicine. Sequences given in records ACC72012-ACC72074 represent polynucleotides of the invention that are differentially-regulated in breast cancer. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           differentially-regulated in breast cancer. The methods and compositions of the present invention are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and/or treating diseases and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     invention relates to isolated polynucleotides which are
                                                                                                                                                                                                               NO 81; 127pp + Sequence Listing; English.

detection, Novel polypeptides designated as FCTRX polypeptides, useful in de prevention and treatment of a broad range of pathological states.

Claim 9; Page 37-39; 215pp; English.

The invention relaters to numear Clara purperplaces, colling inventions relaters to numear the sequences are useful for the treatment or puedencing them. These sequences are useful for the treatment or prevention of numerous disorders including myelogenous leukaemia, acarcinomas, melanomas, astrocytomas, congenital neonatal alloimmune thrombocytopaenia, neurological disorders, neurodegenerative disorders, neuropathy, demyelinaling myelodysplastic syndrome, charcot-Marie Tooth neuropathy, demyelinaling dardner syndrome, immunological disorders, allergy and infection, bronchial asthma, Avellino type cosinophila, lung diseases, reproductive disorders, infertility, male and female reproductive disorders, plasmodic diseases, turcot syndrome, liver cirrhosis, hepaticis C, gastric desmoid disease, turcot syndrome, liver cirrhosis, hepaticis C, gastric disorders, pancreatic diseases such as diabetes, Schistosoma mansoni infection Spinocerebellar ataxia, Plasmodium falciparum parasitaemia, corneal dystrophy-Greonouw type I, Corneal dystrophy-lattice type I and the promose, he mental mystrophy. This sequence represents DNA encoding The invention relates to human FCTRX polypeptides, FCTR1-FCTR7, and the FCTR3a homologue FCTR3f

The invention relates to FCTRX polypeptides and the polynucleotides encoding them. The sequences of the invention are useful for the manufacture of a medicament for diagnosing and treating disorders associated with the FCTRX polypeptide, such as colorectal cancer.

Cadenomatous polyposis coli, myelogenous leukaemia, congenital neonatal autoimmune thrombocytopenia, malignant ovarian tumours, malignant brain tumours, mammary tumours, human gliomas, astrocytomas, renal cell carcinoma, breast adenocarcinoma, ovarian carcinoma, melanomas, cell and granular cell carcinoma, neurological disorders, cell and granular cell carcinomas, neurological disorders, conditions, immunological disorders, allergy and infection, asthma, lung diseases, male and femmale reproductive disorders, despetis, despatitis cell disorders, pancreatic disorders, syndrome, liver cirrhosis, hepatitis cell disorders, pancreatic diseases, diabetes, schistosoma mansoni diffection, spinocerebellar ataxia, plasmodium falciparum infection, milection, spinocerebellar ataxia, plasmodium falciparum infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New FCTRX polypeptide and encoding polynucleotide, useful for preventing or treating FCTRX-related disorders, such as cancer, autoimmune, neurodegenerative, gastrointestinal, reproductive and inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       21 AspPheArgHisSerHisSerProAlaHisLysTyrTyrLeuAlaThrAspProMetSer

These sequences are useful for the treatment or prevention of numerous disorders including myelogenous leukaemia,
                                                                                                            Novel polypeptides designated as FCTRX polypeptides, useful in detection, prevention and treatment of a broad range of pathological states.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ProPheAspAspThrArgCysGlyAspGlyGlyLysAlaThrGluAlaThrLeuThrAsn 100

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to FCTRX polypeptides and the polynucleotides encoding them. The sequences of the invention are useful for the manufacture of a medicament for diagnosing and treating disorders associated with the FCTRX polypeptide, such as colorectal cancer, adenomatous polyposis coli, myelogenous leukaemia, congenital neonatal cutorimmune thrombocytopenia, malignant ovarian tumours, malignant brain tumours, malignant brain carcinoma, breast adenocarcinoma, varian carcinoma, melanomas, clear culodegenerative disorders, nerve trauma, familial myelodysplastic spindrome, Charcot-Marie-Tooth neuropathy, Gardner syndrome, mental health conditions, immunological disorders, allergy and infection, asthma, lung diseases, male and female reproductive disorders, deafness, splyoproctein disciency, desmoid tumour, turcot syndrome, liver cirrhosis, hepatitis c, gastric disorders, pancreatic diseases, diabetes, schistosoma mansoni infection, spinocerebellar ataxia, plasmodium falciparum infection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New FCTRX polypeptide and encoding polynucleotide, useful for preventing or treating FCTRX-related disorders, such as cancer, autoimmune, neurodegenerative, gastrointestinal, reproductive and inflammatory
                                                                                                                                                                                                                        myelogenous leukaemia; congenital neonatal autoimmune thrombocytopenia; ovarian cancer; brain tumour; breast cancer; glioma; astrocytoma; renal cell carcinoma; melanoma; clear cell carcinoma; granular cell carcinoma; neurological disorder; nerve trauma; femilial myelokysplastic syndrome; charcot marie-Tooth neuropathy; gardners syndrome; charcot marie-Tooth neuropathy; allergy; asthma; lung disease; reproductive disorder; deafness; allergy; asthma; lung disease; reproductive disorder; deafness; alvoprotein deficiency; desmoid tumour; turcot syndrome; liver cirrhosis; hepatitis C; gastric disorder; pancreatic disease; diabetes; schistosoma mansoni infection; spinocerebellar ataxia; plasmodium falciparum infection; Groenouw's corneal dystrophy;

The present invention relates to novel differentially regulated genes and polypeptides encoded by them. Sequences of the invention are useful in diagnosing, staging, monitoring, prognosticating, preventing treating or determining the predisposition to diseases or conditions such as prostate cancer. They may be used as molecular markers, drug targets, vaccines, in gene therapy, research, clinical medicine or forensic science. The present sequence is a differentially regulated prostate cDNA, Pc099 which codes for teneurin-2. Pc099 gene is located on chromsome 5q34
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1524 GGAACCAAAGACCTGGCTGGGAATTCGGAAGTTGTGGGCAGGACGGGAGAGCAGTGTCTA 2583

The present invention relates to methods of detecting a prostate cancerassociated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancerassociated polynucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancerassociated polynucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer associated genes are useful for diagnosing or treating prostate cancer is sociated genes are useful for diagnosing or treating prostate cancer. The nucleic acid sequences are particularly useful in gene therapy, as a vaccine or in antisense applications.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                         US-10-029-020-14_COPY_1100_1200

/clone_lib="organ: Brain; Vector: pYx- Asc; Site_l: EcoR I;
/site_2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarcse
gel.First strand cDNA synthesis was primed with oligo-dr
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pYX-Asc vector. The library tag
sequence located between the Not I site and then polyA tail
is AGGGAGACAG. This library was created for the University
lowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,

/ note="Organ: Brain, Vector: pvx- Asc; Site_1: EcoR I;
Site_2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-4806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel. First strand cDNA synthesis was primed with oligo-dr
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pvx-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is TGAGAGAGCC. This library was created for the University
Iowa Brain Anatcmy Project (BMAP): "Gene Discovery in the
Developing Mouse Nervous System", supported by National
Institute of Mental Health (NIWH), Hemin Chin, Ph.D.,
